You could purchase guide 7 1 integer exponents answers or ...

7 1 Integer Exponents Answers - remaxvn.com

Next, consider what happens when we multiply 4^1 and 4^{-1} . If we apply the usual law of exponents (assuming they work for both positive and negative exponents), we would add the exponents ($1 + (-1) = 0$). $4^1 \cdot 4^{-1} = 4^0$ \label{Eq7.1.2} However, because $4^1 = 4$ and $4^0 = 1$, this last equation is equivalent to:

What are an exponents in maths and where are they used? Examples: Exponents in maths are used a) To represent A repeated multiplication of a number by itself as shown below. For example, $5 \times 5 \times 5$ may be written as 5^3 . Hence $5 \times 5 \times 5 = 5^3$, 5 is called the base and 3 is the exponent or power. b) To represent large numbers in more simplified form. Example: $100,000 = 10 \times 10 \times 10 \times 10 \dots$
