Solutions Business Calculus Problems And Solutions

Getting the books **business calculus problems and solutions** now is not type of inspiring means. You could not forlorn going when book buildup or library or borrowing from your friends to admission them. This is an agreed simple means to specifically acquire guide by on-line. This online proclamation business calculus problems and solutions can be one of the options to accompany you in the same way as having additional time.

Download Ebook Business Calculus Problems And Solutions

It will not waste your time. acknowledge me, the e-book will completely proclaim you new concern to read. Just invest tiny grow old to right of entry this on-line proclamation **business calculus problems and solutions** as well as evaluation them wherever you are now.

Section 4-14 : Business
Applications. A company can

produce a maximum of 1500

widgets in a year. If they

sell x widgets during the

year then their profit, in

dollars, is given by,

$$P(x) =$$

$$30,000,000 - 360,000x +$$

$$750x^2 -$$

$$\frac{1}{3}x^3$$
 How many

widgets should they try to

sell in order to maximize

their profit? Solution

~~Solutions~~ (Practice Problems)

Solution. Before applying any calculus rules, first expand the expression using the laws of logarithms.

Here, we can use rule (1).

This step is all algebra; no calculus is done until after we expand the expression.

$$\ln(y = \ln(x^2) = 2\ln(x))$$

Now, take the derivative.

This is the calculus step.

~~Understanding Calculus: Problems, Solutions, and Tips~~

The constraint equation is
the fixed area $A = x y =$
 600 . Solve A for x to get x
 $= 600 / y$, and then
substitute into C : $C = 14 ($
 $600 / y) + 21 y = 8400 / y + 21$
 y . Now we have a function of
just one variable, so we can
find the minimum using
calculus. $C' = - 8400 / y^2 + 21$.
