Bryant Middle School – Dearborn Public Schools

The elements in the modern periodic table are arranged according to increasing atomic number, as a result of the work of Dmitri Mendeleev. This arrangement is based on the number of protons in the nucleus of an atom of the element. The modern form of the periodic table results in the periodic law, which states that when elements are arranged according to increasing atomic number, there is a periodic repetition of their chemical and physical properties.

(8) atomic number
(9) Dmitri Mendeleev
(10) protons
