Spooky Action At A Distance

Einstein later famously derided entanglement as "spukhafte Fernwirkung" or "spooky action at a distance." The EPR paper generated significant interest among physicists, which inspired much discussion about the foundations of quantum mechanics ...

Quantum entanglement - Wikipedia

If "action" is defined as a force, physical work or information, then it should be stated clearly that entanglement cannot communicate action between two entangled particles (Einstein's worry about "spooky action at a distance" does not actually violate special relativity). What happens in entanglement is that a measurement on one entangled particle yields a random result, then a later ...

"Spooky action at a distance" was the disparaging way that Einstein described entangled particles communicating" with each other but other forms of non-locality exist. It is less well-known that Isaac Newton, his contemporaries and successors wrestled with the limitations of his Theory of Gravitation; he knew his theory was incomplete but was powerless to take it further.
