The origin of our species. By Jenny Wong and Lisa Hendry . Our Human Evolution gallery explores the origins of Homo sapiens, tracing our lineage since it split from that of our closest living relatives, the chimpanzee and the bonobo. Gallery developer Jenny Wong tells us more. The gallery takes visitors on an epic journey spanning the last seven million years. Starting in Africa with our early ...

The origin of our species | Natural History Museum

The Origin of Our Species [is] the right book by the right author at the right time. It highlights just how many tantalising discoveries and analytical advances have enriched the field in recent years, and folds them into an appropriately comprehensive, generous and nuanced reflection. -- Marek Kohn,

The Origin of Our Species: Amazon.co.uk: Stringer, Chris ...

Advances in genetic analysis have revealed the first glimmerings of an older origin for H. sapiens, with the discovery that we and our sister species, the Neanderthals, shared a last common ancestor about half a million years ago. Such developments have led some to question the classification of a diverse array of early fossils from across Africa.

As well as many scientific papers, He's also written a number of books, most recently The Origin of Our Species (2012, published in the USA as Lone Survivors: how we came to be the only humans on Earth), and Britain: one million years of the human story (2014, with Rob Dinnis). Series: Wolfson College Podcasts. People: Chris Stringer; Oxford Unit: Wolfson College; Keywords: human origins ...

The Origin of Our Species | University of Oxford Podcasts ...

The origin of our species is largely a description of what we know about human origins. It is not an autobiography, but Stringer's personal involvement in the saga comes through very well just the same. The debates are there too, and these days it is easy to forget that those areas where there is now consensus were once rather more fiercely fought over. In the 1970s and 1980s, there were far ...

On the Origin of Species. England became quieter and more prosperous in the 1850s, and by mid-decade the professionals were taking over, instituting exams and establishing a meritocracy.The changing social composition of science—typified by the rise of the freethinking biologist Thomas Henry Huxley—promised a better reception for Darwin.Huxley, the philosopher Herbert Spencer, and other ...
